

# Prototype Electronics wins Award of Excellence 2025

In any industry there are always organisations that stand out from their peers and set the standards that others in their field have to aspire to achieve. Based in Dorset, Prototype Electronics is an organisation that certainly meets this criteria leading the way as one of the leaders in PCB Assembly Manufacturing. They have made quite a name for themselves over the years establishing a well deserved reputation as one of the rising stars of the industry and if the last few years are any barometer of what the future holds then there are many successful chapters yet to be written in the Prototype Electronics story.

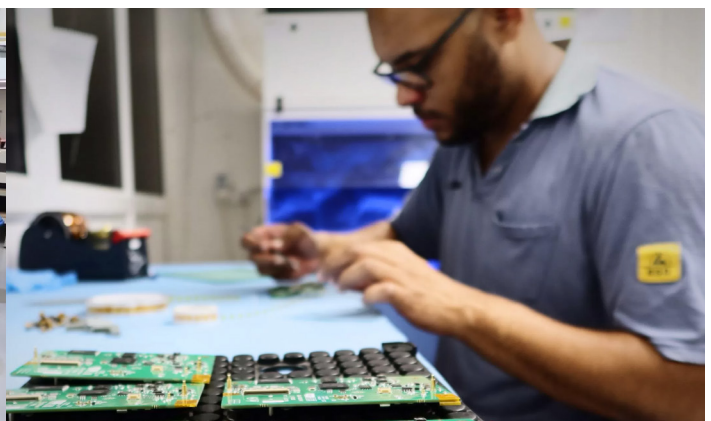

The reputation they have is fully justified and is now beginning to earn them more tangible forms of recognition. In the prestigious Southern Enterprise Awards they were given the impressive accolade of being named Best PCB Assembly Firm. The award was well deserved and has further cemented their reputation as one of the absolute leaders in their field. Following on from that success we are delighted to announce that Prototype Electronics are the latest recipients of one of our 2025 Awards of Excellence. They have won the award for PCB Assembly Manufacturers for 2025.

With our awards we think it's important to recognise organisations that are bringing something new and innovative to their marketplace. They don't necessarily have to be the biggest but they have to be an organisation that is trying to offer something different to what is already out there and above all they must offer a great product or service. We feel that Prototype Electronics ticks all the boxes and are worthy winners of our award. The awards are clearly no accident and will come as no surprise to anybody that has worked with them. In this edition we will try and give you an insight into the work that they do and the success that they've enjoyed.

There are many factors but first and foremost they are good at what they do with the entire team sharing the same steadfast determination to maintain the high standards that have become such a trademark. So who exactly are Prototype Electronics and what is it that they do? They are widely regarded as one of the UK's leading PCB assembly manufacturers, offering a complete CEM solution from their modern production facility in Dorset. At Prototype Electronics they can provide electronic manufacturing from rapid prototyping to volume manufacturing.

Regardless of how complex or challenging an assembly project may be, their team of experienced professionals are able to devise a solution providing a bespoke service that is designed to meet the individual needs of their clients. Their service is geared towards the needs of their clients with no job too small and no turnaround too short notice. They never cut corners or compromise on the quality of the service that they've been able to provide with such remarkable consistency. The fact that they are held in such high regard by their clients speaks volumes not only about outstanding levels of service but also the honest and ethical way in which they operate.

One of their great strengths as an organisation is that they are continually striving to improve and always evolving. They are open to embracing change whether it's emerging industry trends or advances in technology in their determination to stay ahead of the curve and to continue to deliver a level of service that is amongst the very best in the industry. The challenge that they face in the future as their reputation grows and the demand for their services increases will be to maintain the high standards that have given them so much success in the past. Given their track record we think it's something that they will achieve and that Prototype Electronics is a name you'll be hearing much more of in the years to come.
